

**Ohio Beef Expo
2015
Health Requirements**

General Health Rules:

1. **IMPORTANT RULE:** All sale cattle are **REQUIRED** to have official 840 EID tags in their ears prior to arrival at the Ohio Beef Expo. EID tags are acceptable only if the first three numbers are "840" and the herd premise ID number appears on the CVI (Health Paper). No other form of ID is acceptable for sale cattle. The 15 digit EID number must be on the CVI.
2. **IMPORTANT RECOMMENDATION:** It is strongly recommended that all bulls over 12 months of age be tested for Trichomoniasis. Bulls under 12 months of age are not completely exempt from Trich rules. See below under Health Requirements for sale cattle for more information on Trich testing.
3. **IMPORTANT RULE:** All sale, display, and show cattle including genetic pathway bulls (but excluding junior show cattle housed in the Gilligan building) are **REQUIRED** to be tested for Bovine Viral Diarrhea (BVD). See below for information regarding BVD testing.
4. **IMPORTANT NOTE:** Please print these health requirements and show them to your veterinarian so that they may ensure that your consignments meet them. The lot numbers of the animals that do not meet the Ohio Beef Expo health requirements outlined herein will be announced prior to each breed sale. Health papers (CVIs) to go from the Ohio Beef Expo to the buyer will **NOT** be issued for cattle that do not meet the Ohio Beef Expo health requirements outlined herein. A list of the lots that do not meet the requirements will be available in the Beef Expo office on Friday by 2:00 PM. Please check in at the office to be sure that your lots meet the requirements. Furthermore, if an animal meets the requirements for the Ohio Beef Expo but, to the knowledge of the veterinarian re-issuing the CVI on Saturday, does not meet the entry requirements of the state of destination (This is rare but does occur- see Rule # 9 below.), a CVI will not be issued and the buyer and seller will thus need to work out an equitable solution to the situation.
5. An Official Certificate of Veterinary Inspection (CVI) i.e. health paper is **REQUIRED** for all sale cattle. A CVI is also required for exhibition cattle and display cattle that originate from outside Ohio. A CVI is not required for exhibition / display cattle that originate from within Ohio and are not to be sold. A Certificate of Veterinary Inspection is a form from the state of origin that has been completed and issued by a licensed and accredited veterinarian attesting to the health status of the animal listed thereon. All animals for which a CVI is required are required to have official individual identification. Sale cattle must have 840 RFID tags; acceptable forms of ID for display and show cattle are official 840 RFID tags, official USDA metal tags, or tattoos that correspond to breed registration certificates. RFID tags are only acceptable if the first three numbers are "840" and the herd premise ID number appears on the CVI. No other form of ID is acceptable.
6. Each sale animal must be issued its own individual CVI. That is, **bring one health paper for each lot**. Do not list more than one sale animal on a CVI. Please write the sale lot number of the animal on the top right corner of the CVI. In the case of cow-calf pairs, if the calf is of an age such that it will certainly not be split from its mother, the dam and calf may be listed on the same CVI. If there is any chance that the dam and calf will be sold to different buyers, they should each be issued an individual CVI.
7. CVIs are required to be issued within 30 days prior to the date of the sale (on or after February 20, 2015). Regarding these health requirements generally, the official date to be used when determining when tests must be performed (e.g. "within 30 days of the date of the sale") or when determining the age of the animal with respect to testing requirements for the 2015 Ohio Beef Expo is March 21, 2015.
8. It is not required but is **STRONGLY RECOMMENDED** that all cattle receive at least one dose of modified live (2 to 4 weeks prior to the event) or two doses of killed (2 to 4 weeks apart with the second dose 2 to 4 weeks prior to the event) respiratory disease (IBR, BVD, BRSV, PI3) vaccine.
9. The Brucellosis and TB requirements for sale cattle are designed to be reasonable for the consignors and are based upon the fact that cattle sell into many states. Cattle health entry requirements for each state are continually changing. Cattle that meet the following requirements should meet the requirements for entry into most, but not all, states. For example, Montana, California, and some other states require that all females be Officially Calfhood Vaccinated (OCV) against Brucellosis. Given that the vast majority of the cattle sold at the Ohio Beef Expo do not sell into states that require females to be OCV, we have chosen not to require OCV of all females. An additional example is Trichomoniasis- many states have Trich testing requirements. If you believe prior to the Ohio Beef Expo that your consignments may sell into a state with more stringent entry requirements than those of the Expo, then you are obligated to meet those requirements. Likewise, if cattle sell into Canada or other foreign countries, further arrangements will need to be made between the buyer and the seller.
10. The Ohio Beef Expo and / or State Veterinarian may reject any animal that poses a threat from evidence of contagious or infectious disease (to include ringworm and warts).

Health Requirements for Sale Cattle:

Bovine Virus Diarrhea (BVD) requirements for sale, display and show cattle including cattle originating in Ohio and including genetic pathway bulls but excluding junior show cattle:

- All sale, display and show cattle are required to be tested for Bovine Viral Diarrhea (BVD) persistent infection (PI) status. Acceptable tests include and are limited to: Immunohistochemistry (IHC) on skin, Antigen-capture ELISA (ACE) on serum or skin, Polymerase chain reaction (PCR) on whole blood, serum or skin. Animals must be individually tested. Pooled testing is acceptable only if documentation is provided that the animal was specifically included in the pool and that the pool contained no more than 7 animals. Type of test and test result must be listed on the CVI.

Brucellosis requirements for sale cattle including cattle originating in Ohio:

- Animals originating from a certified Brucellosis free herd: No test required.
 - The date of the last herd test and the herd certification number MUST be listed on the CVI.
- Animals originating from a non-certified herd:
 - Animals under 6 months of age: No test required.
 - Bulls over 6 months of age on the date of the sale must be negative to an official Brucellosis test conducted within 30 days of the date of the sale.
 - Females between 6 months and 14 months of age:
 - If Officially Calhooed Vaccinated (OCV), no test required. Proof that the female is OCV must be written on the CVI by the veterinarian. “Proof” must be as outlined below.
 - If not OCV, then must be negative to an official Brucellosis test conducted within 30 days of the date of the sale.
 - Females over 14 months of age (including OCV females) must be negative to an official Brucellosis test conducted within 30 days of the date of the sale.
- Note: Official Calhooed Vaccination (OCV) for brucellosis is not required but is desirable since some states will not allow females to enter the state if they were not vaccinated as calves. If a female was OCV then it is required that some evidence proving this appears on the CVI. Examples of “proof” include and are limited to:
 - “V” series USDA tag number recorded on CVI.
 - The letters “OCV” with the veterinarian’s initials written on the CVI attesting that the veterinarian has observed a legible official OCV tattoo in the animal.
 - A copy of the original OCV certificate that clearly identifies the animal that was OCV as the same animal listed on the CVI.

Tuberculosis (TB) requirements for sale cattle including cattle originating in Ohio but excluding cattle originating from California or Michigan:

- Animals originating from an accredited Tuberculosis free herd: No test required.
 - The date of the last herd test and the herd accreditation number MUST be listed on the CVI.
- Animals originating from a non-accredited herd:
 - Animals under 18 months of age: No test required.
 - Animals over 18 months of age: must be negative to a TB test performed within 60 days of the date of the sale.
- For Tuberculosis requirements for sale cattle originating from **California and Michigan**: contact the Ohio Department of Agriculture at 614 728 6220.

Trichomoniasis recommendation for sale bulls including cattle originating in Ohio:

- Nearly all states west of the Mississippi and some eastern states require a negative Trich test prior to entry.
- Health Papers WILL NOT be written for bulls that do not meet destination state Trich requirements.
- Information for your vet on how to perform the test can be found at:
<http://vetmed.iastate.edu/vdpam/disease-topics/tritrichomonas-foetus>
- Virgin bulls under 12 months of age on the date of the sale:
 - The following statement must appear on the CVI accompanied by the owner’s signature:
“I attest that this bull is a virgin.”
 - Note that if the bull sells into a state with Trichomoniasis requirements then the seller will need to come to the health paper desk following the sale to sign this statement on the new CVI as well.
- Bulls over 12 months of age on the date of the sale and all non-virgin bulls:
 - It is strongly recommended (but not required) that bulls be tested for Trichomoniasis.
 - PCR test within 28 days of the date of the sale. A single culture test does not meet the requirement.
